By Michael G. Rayel, MD
One of the best books that covers major psychiatric, medical, and neurologic disorders. From fragile X syndrome to Klein-Levin syndrome, from limbic encephalitis to radiation encephalopathy, it practically covers all illnesses that manifest with psychiatric

syndromes. Ideal for clinicians who wish to know the various etiologies of certain symptoms. 1 of 5 people found the following review helpful. handbook of medical psychiatry By A Customer excellent book for medical student rotations in psychiatry. very practical and helpful in differentiating a diagnosis.

This handbook is a comprehensive text covering nearly every psychiatric, neurologic, and general medical condition capable of affecting mental status. It covers both common and uncommon disorders with well-organised, concise, and practical discussions geared for quick reference. The book is divided into 30 sections patterned after topic headings in the DSM-IV. Within each section is a series of chapters that briefly describe an overview, time of onset, clinical features, course, complications, aetiology, differential diagnosis, and treatment of a given disorder. A short list of references follows every chapter, and many chapters include radiographs that show characteristics of the disease process. The final section covers psychopharmacology, emphasizing medical features such as pharmacokinetics, side effects, drug-drug interactions, and complications of overdose. This is a comprehensive, medically oriented, and user-friendly text that complements - and in some cases takes the place of - the larger psychiatric tomes. It is equally useful to the medical student and to the practitioner in need of a quick refresher or confronted with a rare or unusual condition. Truly comprehensive coverage ranging from the most common disorders to the lesser-known rare disorders. Detailed discussion of assessment, diagnosis, and treatment options for each disorder. Covers every psychopharmacologic agent available. New topics/chapters include: Fetal Alcohol Syndrome, Encopresis, Schizophreniform Disorder, Brief Psychotic Disorder, Jactatio Nocturna Capitis, Schizoid Personality Disorder, Avoidant Personality Disorder, Supersensitivity Psychosis, Rabbit Syndrome, Amnesia, Catatonia, Alien Hand Syndrome, Environmental Dependency Syndrome, Postictal Psychosis, Psychosis of Forced Normalization, Interictal Psychosis, Interictal Personality Syndrome, Fronto-temporal Dementia, Cortico-Basal Ganglionic Degeneration, Multiple System Atrophy, Neuroanthocytosis, Dentatorubropallidolusian Atrophy, Hashimoto's encephalopathy, New-Variant Creutzfeldt-Jakob Disease, Gertsman-Straussler-Scheinker Disease, Fahr's Syndrome.
