Marilynn M Rosenthal, Max Heirich : Health Policy: Understanding Our Choices From National Reform To Market Forces before purchasing it in order to gage whether or not it would be worth my time, and all praised Health Policy: Understanding Our Choices From National Reform To Market Forces:

Health Policy provides a rare glimpse into the frank exchanges that occur between proponents of quite different

solutions to the dilemma of health care reform. During a critical period in U.S. health policy formation, from 1994 to 1996, advisors to the White House and members of Congress, economists, and health policy experts of varying political outlooks met together under the auspices of the University of Michigan's FORUM on Health Policy. Their proposals were critiqued by leading scholars and health care experts from across the country. These discussions, which took place during the rewriting the Health Security Act proposed by the Clinton administration and the Republican takeover of Congress, shed new light on the nature of health care reform, the nature of the political process, and the realistic choices that now lie before us.

About the Author Marilynn M. Rosenthal is professor of sociology and coordinator of the FORUM on Health Policy at the University of Michigan at Ann Arbor, where Max Heirich is associate professor of sociology and director of the Worker Health Program.
