FloydThis seems to be mostly a recommendation of the health care practices of Kaiser and groups like that. It provides no clear pattern of how to change medical care at the grass roots level. It seems to advocate population based health choices, and neglects the fact that health care is a personal one on one contract of Physician to Patient and everything else has grown to support that interaction. Healthcare in this country is very regional and varies neighborhood to neighborhood and city to city. It is a complex maze of private entrepreneurship, charitable ideas and government spending that grew without a guided plan.The book does add to the crowded discussion and that is good. We need to start the solution by answering the basic unasked and unanswerd question," Is basic healthcare a right or a privilege in the United States." Our answers will flow quickly if we solve that

delima first. If it is a privilege, the government should get out of health care. 0 of 0 people found the following review helpful. Excellent overview of a process to transform healthcare By Joseph Pollman Excellent overview of a process to transform healthcare. This is in sync with what you would learn from Intermountain's ATP program. Great resource book.
