There is simply no other comprehensive review of the Saudi health care system in the English language. Dr. Mufti's book is both broad in its coverage of the whole system and benefits from a historical perspective. It is enthusiastic in support of the achievements of the nation, but the areas of improvement are also clearly delineated, and the discussion on the priorities for the future was very helpful. I feel there is an imbalance between the weight of statistics and the depth of analysis of those statistics in some sections. One could also wonder about the accuracy of some of the data from the Ministry of Health. Overall, an important document for anyone interested in development of health care systems, especially in the Gulf area.

This is an extremely well written account of the Saudi healthcare system written by a surgeon who is also the CEO of a well-respected hospital in Riyadh. The author speaks from a wealth of experience and research into the problems facing the further development of the Saudi healthcare system. The book outlines the incredible achievements Saudi Arabia has accomplished as well as taking an honest look at the areas that still need improvement. The book is a well-layed out, organized blueprint of necessary steps to make the healthcare delivery system more efficient and even better.

Well written and organized. I'm a master student in health management in Australia , and I have been using it as a source for my academic works. I like how it was written in a clear and easy english. I strongly suggest it for anyone who has an interest in the Saudi health system, and the major reforms that have been undertaking.
Thanks, Mohamed Alshamari[...]

This work deals with the current health policy environment, organization and delivery of health services in the Kingdom of Saudi Arabia. It discusses present financing means, and future financing methods such as a proposed national health insurance program and user-changes as well as important strategic issues. It is for healthcare directors, planners and strategists and will be of interest to experts and international investors in health system reorganization.
