This work is designed for students and professionals who are willing to embark on the path of professional socialization. Each chapter begins with a set of clearly outlined objectives to identify learning goals and concludes with experiential exercises to promote goal achievement. The chapters discuss pertinent topics such as attribution theory and its relationship to assertiveness skill development, identifying and resolving moral dilemmas, stress management, and effective communication with the terminally ill and their families. Also covered is the distinction between non-moral and moral values, and many figures are included to complement the material and illustrate key concepts. This book should help health professionals grow by raising consciousness about their "self". It enables them

to think about interacting with the goal of promoting healing and working with groups that have a professional purpose. Also available is the "Instructor's Manual for Patient Practitioner Interaction, Second Edition".

"All physical therapists, independent of their work environment, could use this text to improve the way they interact daily with their patients, peers, and their family. This text is an excellent textbook for use in a physical therapy program curriculum and is highly recommended." Joseph M. David, MS, PT, OCS, CSCS, *Journal of Orthopaedic and Sports Physical Therapy*
