Robin Kearns : Putting Health Into Place: Landscape, Identity, and Well-being (Space, Place and Society)
before purchasing it in order to gauge whether or not it would be worth my time, and all praised Putting Health Into Place: Landscape, Identity, and Well-being (Space, Place and Society):

As the first word of the book's title suggests, this is an active volume, one that contributes to situating health in the simultaneously tangible, negotiated, and experienced realities of place. Robin A. Kearns and Wilbert M. Gesler argue that medical issues are a necessary but insufficient focus in developing geographies of health and healing. This contention is supported by the authors of the thirteen substantive chapters who convey research findings from the Americas, Britain, and the Pacific. This book represents a collective commitment to exploring links between social and cultural theory, ideas about place, and discourses on health that will be of interest to readers across the social and health sciences.

About the Author Kearns is senior lecturer in geography at the University of Auckland, New Zealand Gesler is Associate Professor of geography at the University of North Carolina, Chapel Hill
