From Oxford University Press : Quality of Life Assessment in Clinical Trials: Methods and Practice before purchasing it in order to gauge whether or not it would be worth my time, and all praised Quality of Life Assessment in Clinical Trials: Methods and Practice:

Researchers in all clinical fields are becoming increasingly aware of the importance of quality of life measurements in judging the efficacy of a given treatment, and it is becoming more common for psychological criteria to play an

important role in the evaluation of therapies. In the past ten years a number of methods have been developed for carrying out such assessments. Quality of life research does however use special statistical methods which might well be unfamiliar to the clinician. Quality of life assessment in clinical trials: methods and practice explores these methods in a non-mathematical manner, comparing and contrasting the tools available to the clinician, and highlighting any potential pitfalls. It describes the methods used to collect and analyse quality of life data. The book will have widespread appeal to clinical trialists and researchers from a wide range of specialties.

" ... a valuable source of readings for students taking courses in clinical epidemiology or health services research ... It is a book that teachers of methodology should buy, and clinical-epidemiology researchers should request from their library." Clinical and Investigative Medicine (Dec1998) About the Author Dr Maurice Staquet, Department of Computer Science, Faculty of Medicine, Brussels Free University, Route de Lennik 808, B-1070 Brussels, Belgium. email: staquet@ulb.ac.be
