My one piece of advice- unless you have an assignment due the first day of class, do not purchase the texts on the list until you have spoken to the instructor. It would have saved me a lot of money- not just with this one text. I did read the textbook and it was terrible. It was poorly written and had no information that was helpful to me in my Nursing program.0 of 0 people found the following review helpful. Five StarsBy Barbara A. This is such a horrendous read and there are are, equally or lesser priced textbooks, that are of far better

quality. Just UGH.

Reproductive Health: Women and Mens Shared Responsibility is a much needed reference for both leaders and students in community health. The authors basic premise, that reproductive health must be addressed in an individual, community, and global context, is reflected in this integrated orientation to reproductive health that befits the needs of students of the twenty first century. It offers a cutting-edge approach in its presentation of information about reproductive health, complete with recognition of the role of men, human rights, social justice, global health, infertility, environmental threats, gender violence, and more.
