Joseph Abramson, Z. H. Abramson : Research Methods in Community Medicine: Surveys, Epidemiological Research, Programme Evaluation, Clinical Trials before purchasing it in order to gage whether or not it would be worth my time, and all praised Research Methods in Community Medicine: Surveys, Epidemiological Research, Programme Evaluation, Clinical Trials:

3 of 3 people found the following review helpful. A keeperBy JWThis was a requirement for my Epi 2 class. I don't keep most textbooks, but this one is an exception--well written (even the footnotes have a sly wit), succinct (some chapters are only a few pages), and hopefully a useful reference in the future.1 of 1 people found the following review helpful. NiceBy Soha abdulgaderI had a good experience with that book it was more more organized and helpful in basic things and i hope every one try itThanks a lot

A simple and systematic guide to the planning and performance of investigations concerned with health and disease and with health care Offers researchers help in choosing a topic and to think about shaping objectives and ideas and to link these with the appropriate choice of method Fully updated with new sections on the use of the Web and computer programmes freely available in the planning, performance or analysis of studies

From the Back CoverThis is the sixth edition of Survey Methods in Community Medicine, which has established itself as a standard guide to the design, conduct, and analysis of studies concerned with health, disease, and health care. It is written for students and practitioners of community medicine and public health (epidemiologists, family physicians, nurses, health educators, administrators, and others) who are interested in planning investigations of groups and populations, such as health surveys, cohort studies, comparisons of cases and controls, prophylactic and therapeutic trials, and other epidemiological and evaluative research. The book may also be helpful to non-researchers who wish to enhance their capacity for the judicious appraisal of medical literature. It is a step by step guide to the design, conduct and analysis of these studies, and assumes little prior knowledge, but has copious notes and references for the benefit of readers who wish to learn more. This edition has been revised and updated throughout, with the addition of - A new chapter on the use of the Web in health research. A guide to free computer programs for use in the planning, performance, and analysis of studies. About the AuthorJ.H. Abramson, Emeritus Professor of Social Medicine, The Hebrew University-Hadassah School of Public Health and Community Medicine, Jerusalem. Author of five previous editions of the formerly titled Survey Methods in Community Medicine and Making Sense of Data with OUP. Z.H. Abramson, Beit Hakerem Community Clinic (Clalit Health Services) and Department of Family Medicine, The Hebrew University-Hadassah School of Medicine, Jerusalem.
